Education

National University of Singapore | Bachelor of Computing in Computer Science, Merit Scholar Aug 2024 - Present

Experience

Razer | Software Engineering Intern May 2026 - Dec 2026

- Managed production of **MemPalace**, an AI memory system, resolving architectural tickets to optimize context routing, semantic retrieval, and dynamic fact consolidation.
- Engineered the **MemEval** pipeline to validate memory quality and temporal correctness by processing datasets through real conversation API flows.
- Automated testing workflows via **Bitbucket CI/CD**, including database migrations and **AWS S3** artifact publishing. Implemented comprehensive telemetry for **latency, token usage, and LLM cost tracking**.

MyStorage | Software Engineering Intern May 2024 - Jul 2024

- Architected AI Sales Assistant App**, reducing average sales agent response time by 30% via automated conversation summarization.
- Engineered a barcode-integrated Warehouse App** (JavaScript, Airtable API), saving 0.5 minutes per inventory movement and increasing tracking accuracy.
- Developed a Three.js interactive 3D facility model and authored 20+ pages of **technical documentation** to streamline onboarding.

Projects

MindPalace

- Architected a local-first **RAG pipeline** using **LanceDB** and **Ollama**, implementing a custom **chunking algorithm** for higher-accuracy semantic search.
- Engineered a **state-managed incremental indexer** utilizing file-hashing reconciliation to reduce re-indexing time and guarantee synchronization across diverse data sources like Obsidian vaults.
- Developed a fault-tolerant **Python** execution environment allowing **LLMs** to autonomously select, execute, and self-correct active write-back tools for seamless knowledge base mutation.

FinNews | News Analysis & Impact Prediction Engine

- Architected a modular data pipeline** using the Adapter design pattern to ingest news from multiple APIs and implemented UPSERT logic in SQLite to ensure data idempotency and integrity.
- Fine-tuned a FinBERT Transformer model** using PyTorch and the Hugging Face Trainer API, optimizing sentiment classification accuracy for specialized financial market-impact analysis.

3D Physics Engine (C++)

- Developed **3D rigid-body physics engine**, to master low-level memory management and high-performance simulation.
- Implemented a polymorphic collision system using a double-dispatch pattern and impulse-based resolution to ensure stable object interactions and momentum conservation.

Leadership & Extracurriculars

StartIT (NUS Student Entrepreneurship Club) | Co-director of External Relations

- Orchestrated StartIT Founders' Series**, coordinating logistics for 12+ industry speakers and strategic partners.
- Led cross-functional coordination and stakeholder relations**, securing sponsorships for NUS startup ecosystem.

Skills & Certification

Languages and Systems: Python, C++, C, Java, SQL, JavaScript, HTML/CSS, Linux, Network Security, Cryptography.

AI & ML: LangGraph, Model Context Protocol (MCP), RAG Pipelines, FinBERT, PyTorch, Hugging Face, Scikit-learn.

Frameworks & Tools: React, Next.js, FastAPI, Three.js, Git, Docker, SQLite, LanceDB, Vercel, Render.

Certification: Machine Learning Specialization | Coursera & Stanford University
